USE CASE SPECIFICATION DOCUMENT

Bank Loan Application System (BLAS)

Document Reference	BLAS-UCS-2025-002
Version	1.0 — Final
Prepared By	Business Analysis Team
Reviewed By	QA Lead & Solution Architect
Approved By	Head of Retail Banking
Date	May 2025
Classification	CONFIDENTIAL — Internal Use Only
Related Document	BLAS-BRD-2025-001 (BRD v1.0)

This document is the property of Sunrise Private Bank Ltd. Unauthorised reproduction or distribution is strictly prohibited.

1. Purpose & Scope of This Document

This Use Case Specification Document (UCS) defines the detailed behavioural interactions between actors and the Bank Loan Application System (BLAS) for Sunrise Private Bank Ltd. It describes every significant system use case, specifying normal flows, alternate paths, and exception handling scenarios in sufficient detail to guide system design, development, and testing.

This document is intended for use by:

- Software Development Team — as a primary input to system design and coding.
- QA & Testing Team — as the basis for test case authoring and UAT scenario design.
- Business Stakeholders — to validate that requirements are correctly captured.
- Project Manager — to estimate effort and plan sprints.
- Auditors & Compliance Officers — to verify system behaviour meets regulatory obligations.

This document covers Use Cases for the following BLAS functional areas: (1) Loan Application Submission, (2) KYC & Identity Verification, (3) Credit Assessment & Automated Decisioning, (4) Multi-Level Loan Approval Workflow, and (5) Loan Disbursement & Account Creation. Additional use cases covering post-disbursement lifecycle, collections, and analytics will be documented in a subsequent version.

2. Actor Catalogue

All actors who interact with BLAS — either directly (primary actors who initiate use cases) or indirectly (secondary actors who participate or are notified) — are described below. Actors include both human roles and external systems.

2.1 Human Actors

Actor ID	Actor Name	Type	Role Description	Access Channel
ACT-01	Customer	Primary	A retail individual or MSME business owner applying for a loan. May apply online (self-service) or through a Bank branch with the help of a Relationship Manager.	Web portal, Mobile, Branch
ACT-02	Relationship Manager (RM)	Primary	A Bank sales or branch employee who assists walk-in or referred customers in completing and submitting loan applications. Also monitors application pipeline for their portfolio.	Branch Terminal, Internal Web App
ACT-03	Credit Officer	Primary	A trained underwriter in the Bank's Credit Department who reviews loan applications, analyses credit bureau reports, verifies documents, computes credit risk, and recommends approval or rejection.	Internal Web App
ACT-04	Branch Manager	Primary	The head of a Bank branch who exercises delegated sanction authority for loans within defined amount limits. Reviews and approves/rejects recommendations from Credit Officers for in-limit cases.	Internal Web App
ACT-05	Zonal Credit Manager	Primary	A senior credit authority who reviews and decides on loan applications that exceed Branch Manager authority, or that involve policy deviations flagged by the Credit Officer.	Internal Web App
ACT-06	Central Credit Committee (CCC)	Primary	A group of senior credit executives (typically CRO + 2 Credit VPs) who approve high-value, complex, or exception loans beyond Zonal authority. Operates via workflow and in-person or video meetings.	Internal Web App, Email
ACT-07	KYC Officer	Primary	A specialist in the Bank's Operations team responsible for conducting Video KYC sessions, verifying physical documents, and resolving KYC exceptions flagged by the automated system.	Internal Web App (VKYC Module)
ACT-08	Disbursement Officer	Primary	A member of the Bank's Loans Operations team who reviews pre-disbursement conditions, validates beneficiary account details, and authorises the disbursement transaction.	Internal Web App
ACT-09	IT / System Administrator	Secondary	Responsible for configuring system parameters, managing user access,	Admin Console

Actor ID	Actor Name	Type	Role Description	Access Channel
			monitoring system health, and handling integration failures. Does not participate in normal loan processing flows.	
ACT-10	Internal Auditor	Secondary	Reviews audit logs, workflow trails, and system-generated reports to ensure process compliance. Read-only access to all loan records.	Internal Web App (Read-Only)

2.2 System Actors (External Systems)

Actor ID	Actor Name	Type	Integration Purpose
SYS-01	UIDAI Aadhaar API	External System	Performs Aadhaar OTP-based eKYC authentication and returns verified demographic data for identity verification of individual applicants.
SYS-02	NSDL PAN Verification API	External System	Validates the applicant's PAN number against NSDL records and confirms name and date-of-birth match.
SYS-03	Credit Bureau APIs (CIBIL / Experian / Equifax / CRIF)	External System	Returns real-time credit score, credit report, payment history, DPD records, and outstanding obligation data for credit assessment.
SYS-04	Core Banking System (CBS — Finacle)	External System	Receives instructions to create loan accounts, generate repayment schedules, and execute fund disbursements via NEFT/RTGS/IMPS.
SYS-05	eSign / Digital Signature Service (eMudhra)	External System	Facilitates Aadhaar-based eSign or DSC-based digital signing of sanction letters and loan agreement documents by customers and Bank officers.
SYS-06	SMS / Email Gateway	External System	Delivers OTPs, application status notifications, document requests, approval/rejection communications, and disbursement confirmations to customers.
SYS-07	Document Management System (DMS)	Internal System	Stores all uploaded and generated documents (KYC documents, income proof, signed agreements) with version control and access logging.
SYS-08	OCR Engine	Internal System	Extracts structured data from scanned or uploaded documents (ID cards, bank statements, ITRs) and returns key fields for auto-population of application forms.
SYS-09	Rule Engine / Credit Scorecard	Internal System	Executes configurable credit policy rules, eligibility logic, and scorecard calculations to produce automated credit recommendations.
SYS-10	NACH / NPCI Mandate System	External System	Registers the borrower's repayment mandate (auto-debit authorisation) for EMI collection from the specified bank account.

3. Use Case Index & Relationship Overview

3.1 Use Case Summary Table

UC ID	Use Case Name	Primary Actor	Priority	Phase
UC-001	Submit Loan Application	Customer / Relationship Manager	High	Phase 1
UC-002	Perform Digital KYC Verification	Customer / KYC Officer	High	Phase 1
UC-003	Conduct Credit Assessment & Automated Decisioning	Credit Officer / Rule Engine	High	Phase 1
UC-004	Approve or Reject Loan Application (Multi-Level)	Branch Manager / Zonal CM / CCC	High	Phase 1
UC-005	Disburse Sanctioned Loan	Disbursement Officer / CBS	High	Phase 1
UC-006	Track Application Status (Customer Self-Service)	Customer	High	Phase 1
UC-007	Upload & Validate Supporting Documents	Customer / Relationship Manager	High	Phase 1
UC-008	Generate & Execute Loan Agreement (eSign)	Customer / Credit Officer	High	Phase 1
UC-009	Manage SLA Escalation	System / Supervisor	Medium	Phase 1
UC-010	Process Loan Foreclosure Request	Customer / Disbursement Officer	Medium	Phase 2

3.2 Actor-Use Case Participation Matrix

Use Case	Customer	RM	Credit Officer	Br. Manager	Zonal CM	CCC	KYC Officer	Disb. Officer	System Actors
UC-001	P	P	—	—	—	—	—	—	SMS/Email, OCR
UC-002	P	S	—	—	—	—	P	—	UIDAI, NSDL, DMS
UC-003	—	—	P	S	—	—	—	—	Bureau, Rule Engine
UC-004	—	S	S	P	P	P	—	—	SMS/Email
UC-005	—	—	—	—	—	—	—	P	CBS, NACH, SMS
UC-006	P	S	—	—	—	—	—	—	SMS/Email
UC-007	P	P	S	—	—	—	—	—	OCR, DMS

Use Case	Customer	RM	Credit Officer	Br. Manager	Zonal CM	CCC	KYC Officer	Disb. Officer	System Actors
UC-008	P	—	S	—	—	—	—	—	eSign, DMS
UC-009	—	S	S	S	P	—	—	—	SMS/Email
UC-010	P	—	S	S	—	—	—	P	CBS, DMS, SMS

P = Primary Actor S = Secondary Actor — = Not Involved

4. Detailed Use Case Specifications

Each use case is documented in full structured format following the industry-standard IEEE 830 and RUP use case template. Colour coding: Green = Main Success Flow, Purple = Alternate Flows, Red = Exception Flows, Orange = Business Rules.

4.1 UC-001 — Submit Loan Application

UC-001 Submit Loan Application	
Description	This use case describes the end-to-end process by which a Customer (or Relationship Manager on their behalf) initiates a new loan application, selects the desired loan product, provides personal and financial details, uploads initial documents, and formally submits the application into the BLAS processing queue. The system performs an initial eligibility pre-screen and issues a unique Application Reference Number (ARN) upon successful submission.
Trigger	Customer visits the BLAS web portal or mobile interface and clicks 'Apply for Loan', OR a Relationship Manager initiates a new application on behalf of a walk-in customer at a Bank branch terminal.
Priority	High — Critical Path for Phase 1 Go-Live
Frequency	Approximately 500–800 applications per business day at projected load
Primary Actor	Customer (self-service channel) OR Relationship Manager (branch-assisted channel)
Secondary Actors	SMS/Email Gateway (SYS-06), OCR Engine (SYS-08), Rule Engine / Eligibility Pre-screener (SYS-09), Document Management System (SYS-07)
Pre-Conditions & Post-Conditions	
Pre-Conditions	- The BLAS portal is accessible and operational (system availability > 99.9%). - The Customer has a valid mobile number for OTP verification; the mobile number has not been blocked due to excessive failed OTP attempts. - The Customer does not already have an active, non-rejected application for the same loan product within the last 90 days. - If applying via Relationship Manager: the RM is logged into the BLAS internal portal with a valid, active session and possesses the 'RM — Application Initiator' role. - The selected loan product is active and available for applications (not suspended by product management).
Post-Conditions	- A unique Application Reference Number (ARN) in the format BLAS-YYYY-XXXXXXX is generated and persisted in the BLAS database. - The application record is created with status 'Submitted — Pending Document Verification'. - An acknowledgement SMS is sent to the Customer's registered mobile number within 2 minutes of submission. - An acknowledgement email is sent to the Customer's registered email address with the ARN, product details, and next steps. - A checklist of required documents is generated and presented to the Customer (and sent via email). - The application enters the document verification queue visible to the assigned Relationship Manager and Branch Manager. - The pre-screening result (Pass / Refer / Decline) is recorded against the application.

	If pre-screened as Declined: the application is closed with reason codes stored, and a decline communication is triggered (within 24 hours per RBI Fair Practices Code).
Main Success Flow	
Steps	- Customer navigates to the BLAS portal (web or mobile) and selects 'Apply for a New Loan'. - System displays the loan product selector showing all active loan products with key parameters (interest rate range, maximum amount, minimum eligibility criteria). - Customer selects the desired loan product (e.g., Home Loan, Personal Loan, MSME Term Loan) and clicks 'Proceed'. - System prompts for mobile number and sends a 6-digit OTP via SMS for identity confirmation. - Customer enters the OTP. System verifies the OTP within 3 minutes of issuance. - System presents the multi-step application form. Step 1: Personal Details (Name, DOB, PAN, Aadhaar, Address, Occupation Type). - Customer completes Step 1 and proceeds. System auto-validates PAN format and checks for duplicate active applications. - System presents Step 2: Financial Details (Monthly Income, Employer Name, Employment Vintage, Existing EMI obligations, Bank account details for disbursement). - Customer completes Step 2. System calculates indicative loan eligibility, EMI, and FOIR in real time and displays to the Customer. - System presents Step 3: Loan Requirement Details (Loan Amount requested, Tenure, Purpose of Loan, Collateral details if applicable). - Customer completes Step 3 and reviews the complete application summary screen. - Customer provides digital consent for bureau inquiry and eKYC (as mandated by RBI and DPDPA 2023) and clicks 'Submit Application'. - System triggers automatic pre-screening: checks age, income, FOIR, employment type, and minimum CIBIL score thresholds against the Rule Engine. - Rule Engine returns 'PASS' on pre-screening. - System generates the ARN, saves the application with status 'Submitted — Pending Documents', and presents confirmation screen to Customer. - System dispatches acknowledgement SMS and email with ARN, product summary, document checklist, and estimated processing time. - Application enters the Branch document verification queue; assigned RM receives an in-app notification.
Alternate Flows	
AF-001-A: Branch-Assisted Application by Relationship Manager	- RM logs into the internal BLAS portal and selects 'New Application — Branch Assisted'. - RM searches for existing customer by mobile number, PAN, or Aadhaar. If found, system pre-fills known data. - If new customer: RM creates a new customer profile by entering personal details and capturing consent in paper form (to be digitised post-submission). - RM completes all application form steps on behalf of the Customer, entering data provided by the Customer in person. - RM selects 'Branch-Assisted' channel tag. Application flow continues from main flow Step 12.

AF-001-B: Partial Application Save and Resume AF-001-C: Pre-Screening Result: REFER (Manual Review Required)	23. System records the submitting RM's employee ID against the application for accountability and performance tracking. 24. Customer completes Step 1 and Step 2 but cannot complete Step 3 in the current session. 25. Customer clicks 'Save and Continue Later'. 26. System saves the partial application with status 'Draft' and sends an SMS/email with a secure resume link valid for 30 days. 27. On resumption: Customer clicks the resume link, re-authenticates via OTP, and continues from the last saved step. 28. System restores all previously entered data. Customer completes remaining steps and submits. 29. Application continues from main flow Step 12 onwards. 30. Rule Engine returns 'REFER' on pre-screening (e.g., income slightly below threshold but other factors positive). 31. System does not auto-decline. Application is created with status 'Submitted — Pending Credit Pre-Review'. 32. Application is flagged in the Credit Officer's queue for manual pre-screening review within 1 business day. 33. Customer receives acknowledgement with ARN; no mention of pre-screening referral is communicated (to avoid premature adverse communication). 34. Credit Officer reviews within SLA and either approves progression to full assessment or declines with reason codes.
Exception Flows	
EF-001-A: OTP Verification Failure	35. Customer enters an incorrect OTP. 36. System displays error and allows up to 3 retry attempts. 37. After 3 failed attempts within one session, system locks OTP generation for that mobile number for 30 minutes. 38. Customer is presented with instructions to retry after 30 minutes or visit a branch. 39. Use case terminates; no application record is created.
EF-001-B: Duplicate Active Application Detected EF-001-C: Pre-Screening: Auto-Dcline	40. During Step 7, system detects an existing active application for the same product and the same PAN within the last 90 days. 41. System displays an alert: 'You already have an active application [ARN] for [Product]. Please track its status before applying again.' 42. Customer is redirected to the application status tracking screen. 43. Use case terminates; new application is NOT created. 44. Rule Engine returns 'DECLINE' on pre-screening (hard fails: age > 70 at maturity, income < minimum floor, negative list match). 45. System records the application with status 'Pre-Screened Declined' and stores all reason codes. 46. An automated decline communication is generated and dispatched to the Customer within 24 hours, citing permissible decline reason codes per RBI Fair Practices Code. 47. Customer is informed they may re-apply after a mandatory 90-day cooling period unless the decline was due to a hard ineligibility (e.g., age). 48. No further workflow processing occurs; use case terminates.

EF-001-D: Session Timeout During Application	49. Customer's session times out due to 15 minutes of inactivity. 50. System auto-saves all data entered in the current step before session termination. 51. Customer is shown a session expiry message with an option to resume the application. 52. On resume, OTP re-authentication is required; previously entered data is restored.
Business Rules	
Rules	• BR-001: A Customer may not have more than one active application for the same loan product at the same time. Duplicate detection is based on PAN + Product Code. • BR-002: OTPs are valid for 5 minutes from generation. Maximum 3 attempts per OTP. Mobile number is locked for 30 minutes after 3 consecutive failures. • BR-003: Partial applications are saved in 'Draft' status and are automatically purged after 30 calendar days if not submitted. • BR-004: The Customer must provide explicit digital consent for credit bureau inquiry before the application can be submitted. Absence of consent must block submission. • BR-005: Pre-screening decline reason codes communicated to Customers must be from the RBI-approved code list (Fair Practices Code, 2015). Internal scoring reasons must NOT be disclosed. • BR-006: Applications submitted after 6:00 PM IST are treated as next business day submissions for TAT calculation purposes. • BR-007: Minimum applicant age is 21 years at the time of application. Maximum age at loan maturity must not exceed 70 years (65 for self-employed). System enforces these as hard rules.

4.2 UC-002 — Perform Digital KYC Verification

UC-002 Perform Digital KYC Verification	
Description	This use case covers the complete digital Know Your Customer (KYC) process for individual loan applicants, compliant with RBI Master Direction on KYC (2023) and the V-CIP circular. It includes Aadhaar OTP-based eKYC via UIDAI API, PAN verification via NSDL API, and where required, Video KYC (VKYC) conducted by a certified Bank KYC Officer. For MSME borrowers, it includes business entity verification via MCA21 API. The use case concludes with the KYC status being recorded and the application proceeding to the document review stage.
Trigger	Application status transitions to 'Submitted — Pending KYC' following a successful pre-screening result. Alternatively, the Customer initiates the eKYC process from their application dashboard by clicking 'Complete KYC'.
Priority	High — Mandatory regulatory requirement; blocks all downstream processing
Frequency	One KYC verification per application; approximately 500–800 per business day
Primary Actor	Customer (for eKYC self-service) / KYC Officer (for VKYC sessions)
Secondary Actors	UIDAI Aadhaar API (SYS-01), NSDL PAN Verification API (SYS-02), MCA21 API (for MSME), Document Management System (SYS-07), SMS/Email Gateway (SYS-06), Relationship Manager
Pre-Conditions & Post-Conditions	

Pre-Conditions	• A valid submitted loan application with ARN exists in status 'Pending KYC' or 'KYC In-Progress'. • The Customer has a valid, registered Aadhaar number linked to their current mobile number (for OTP-based eKYC). • Customer has provided explicit digital consent for Aadhaar-based eKYC data sharing as required under the Aadhaar Act 2016 and DPDPA 2023. • UIDAI eKYC API service is operational. If not, the system has fallen back to VKYC mode. • For VKYC: A certified KYC Officer is available in the VKYC queue; Customer has a device with a working camera and stable internet connection.
Post-Conditions	• KYC status for the application is updated to one of: 'KYC Verified', 'KYC Pending — Additional Documents', or 'KYC Failed'. • Verified KYC data (name, DOB, address, gender) is stored encrypted in the BLAS Customer Master and against the application record. • Aadhaar number is stored in masked form (last 4 digits visible only) in compliance with UIDAI data storage guidelines. • PAN verification result (Match / Mismatch / Not Found) is recorded against the application. • All KYC documents and verification artefacts are archived in the DMS with appropriate access controls. • CKYC upload to the Central KYC Registry is queued for new-to-bank customers. • If KYC is verified: Application status advances to 'KYC Complete — Pending Document Review'. • If KYC fails: Application is put on hold with a specific failure reason code; Customer receives notification with remediation instructions.
Main Success Flow	
Steps	53. System detects application status 'Pending KYC' and sends Customer an SMS/email with a link to initiate eKYC. 54. Customer logs into the BLAS portal using their ARN and registered mobile OTP and navigates to the 'Complete KYC' section. 55. System displays KYC initiation screen. Customer confirms the Aadhaar number entered during application and consents to share data with UIDAI. 56. System calls the UIDAI OTP generation API. UIDAI sends a 6-digit OTP to the Aadhaar-registered mobile number. 57. Customer enters the UIDAI OTP within 10 minutes. 58. System submits the OTP and Aadhaar number to UIDAI eKYC API and receives the verified demographic data response (Name, DOB, Address, Gender, Photo). 59. System performs a name match between the eKYC response and the application-provided name. Match score must be $\geq 85\%$ (fuzzy match algorithm). 60. System calls NSDL PAN verification API with the Customer's PAN, name, and DOB to confirm PAN validity and name/DOB consistency. 61. System receives PAN verification result (Valid / Invalid / Name-DOB Mismatch). 62. System performs Negative List / Watchlist screening: checks against RBI Wilful Defaulter list, CERSAI, and Bank's internal blacklist. 63. All checks pass. System updates KYC status to 'KYC Verified' and stores masked Aadhaar and verified PAN against the application. 64. System queues a CKYC upload request for new-to-bank customers.

	65. Application status is advanced to 'KYC Complete — Pending Document Review'. Customer receives confirmation notification.
Alternate Flows	
AF-002-A: VKYC Path (UIDAI API Unavailable or Customer Request)	66. UIDAI eKYC API is unavailable, OR Customer's Aadhaar is not linked to their mobile number, OR Customer explicitly requests VKYC. 67. System switches to VKYC mode and presents Customer with a screen to schedule a Video KYC appointment. 68. Customer selects an available time slot. System sends a calendar invite with a secure VKYC link. 69. At scheduled time, KYC Officer joins the VKYC session from the internal portal. Customer joins via the secure link. 70. KYC Officer verifies live presence (liveness check): asks Customer to blink, smile, or show a hand gesture. 71. KYC Officer instructs Customer to hold up original Aadhaar card and PAN card to the camera. System captures high-resolution screenshots. 72. KYC Officer verbally confirms name, DOB, address, and purpose of loan. Records session with Customer consent. 73. KYC Officer manually enters verified data into the system and uploads captured document screenshots to DMS. 74. KYC Officer marks the VKYC as 'Completed — Verified' or 'Completed — Rejected' with reason. 75. If verified: flow rejoins main flow at Step 10 (Negative List screening). If rejected: EF-002-B is triggered.
AF-002-B: MSME / Corporate Borrower KYC	76. Application is for an MSME or corporate borrower (identified by Borrower Type field). 77. System additionally requires: GST Registration Certificate, Certificate of Incorporation / Partnership Deed, Business PAN, and director/promoter KYC for individuals with > 25% ownership. 78. System calls MCA21 API with the CIN (Company Identification Number) to fetch company master data: registered name, status, directors, paid-up capital. 79. System performs name and address match between MCA21 data and application-provided business details. 80. Individual KYC for promoters/directors is conducted per the main flow (eKYC or VKYC). 81. If all entity and individual KYC checks pass, Entity KYC is marked 'Verified'. 82. Flow rejoins main flow at Step 10 (Negative List screening).
AF-002-C: Name Mismatch — Minor Discrepancy (Score 70–84%)	83. Fuzzy name match score between eKYC response and application name is between 70% and 84%. 84. System flags the application for 'KYC — Name Mismatch Review' and notifies the KYC Officer. 85. KYC Officer reviews the discrepancy (common reasons: initials vs full name, spelling variations). 86. If KYC Officer determines discrepancy is acceptable (e.g., 'Priya S. Sharma' vs 'Priya Sharma'), they approve with a justification comment. 87. If unacceptable, KYC Officer escalates to EF-002-A. 88. Application continues from main flow Step 9 upon KYC Officer approval.
Exception Flows	
EF-002-A: PAN Name / DOB Mismatch	89. NSDL PAN API returns a Name or DOB mismatch (i.e., PAN exists but name/DOB does not match application data).

	90. System sets KYC status to 'KYC On Hold — PAN Mismatch' and notifies the Customer and assigned RM. 91. Customer is asked to re-confirm their PAN details or upload a name-change affidavit / DOB correction proof. 92. KYC Officer reviews the submitted evidence and manually overrides if acceptable, or rejects if the mismatch cannot be resolved. 93. If rejected: Application status is set to 'KYC Failed — PAN Mismatch'. Customer can reapply after resolving PAN issue with Income Tax Department.
EF-002-B: Watchlist / Negative List Match	94. Negative list screening (Step 10) returns a match against RBI Wilful Defaulter list, CERSAI, or Bank internal blacklist. 95. System immediately places the application on 'Regulatory Hold — Compliance Review Required' and suppresses further automated processing. 96. System sends an automated internal alert to the Chief Compliance Officer and Head of Credit (not to the Customer). 97. Compliance Officer reviews the match within 1 business day. If the match is a false positive (common name match), Officer clears the flag with justification. 98. If the match is confirmed: Application is permanently rejected. Customer receives a decline notification without specific regulatory reasons cited (per RBI/PMLA guidelines). 99. A SAR (Suspicious Activity Report) is filed with FIU-IND if required under PMLA 2002.
EF-002-C: UIDAI API Returns Error / Timeout	100. UIDAI eKYC API returns an error code or does not respond within 10 seconds. 101. System retries the API call up to 2 additional times with 5-second intervals. 102. If all 3 attempts fail: System automatically switches to VKYC mode (AF-002-A) and notifies the Customer with VKYC scheduling instructions. 103. Incident is logged in the system's API health monitoring dashboard for IT Operations review.
Business Rules	
Rules	- BR-008: Aadhaar eKYC consent must be captured separately from the general loan application consent and must include the specific purpose (KYC for loan application), data recipient (Bank name), and storage duration. Consent without all three elements is invalid. - BR-009: The Aadhaar number must NEVER be stored in plain text. Only the last 4 digits of the Aadhaar (VID-masked form) may be displayed or stored. Full Aadhaar hash (SHA-256) may be stored for deduplication purposes only. - BR-010: VKYC sessions must be recorded (audio + video) with Customer consent and stored for a minimum of 5 years per RBI V-CIP guidelines. Recording must not be interrupted; incomplete sessions must be restarted. - BR-011: CKYC upload is mandatory for all new-to-bank Customers. Existing CKYC records must be fetched and linked rather than creating duplicates. - BR-012: Negative list screening must be performed at application submission AND again immediately before final sanction. Any match after initial clearance requires fresh Compliance review.

4.3 UC-003 — Conduct Credit Assessment & Automated Decisioning

UC-003 | Conduct Credit Assessment & Automated Decisioning

Description	This use case describes the credit underwriting process for a loan application after KYC and document verification are complete. It covers automated credit bureau data retrieval, FOIR and DTI computation, rule engine-based credit scorecard execution, and generation of a Credit Assessment Report (CAR) with an automated recommendation (Approve / Refer / Decline). The Credit Officer reviews the CAR, may add qualitative input, and submits the application for approval workflow.
Trigger	Application status transitions to 'KYC Complete — Pending Credit Assessment' after successful document verification sign-off by the Relationship Manager or Branch Manager.
Priority	High — Core credit risk management function
Frequency	All submitted and KYC-verified applications; approximately 400–700 per business day
Primary Actor	Credit Officer (Human review and recommendation)
Secondary Actors	Credit Bureau APIs — CIBIL, Experian, Equifax, CRIF (SYS-03), Rule Engine / Credit Scorecard (SYS-09), Branch Manager (notification), SMS/Email Gateway (SYS-06)
Pre-Conditions & Post-Conditions	
Pre-Conditions	- Application status is 'KYC Complete — Pending Credit Assessment'. - All mandatory documents have been uploaded and verified (income proof, bank statements, ITR, employment proof, collateral documents if applicable). - KYC status is 'Verified' for all applicants and co-applicants. - Customer's eKYC consent for credit bureau inquiry has been recorded in the system. - All four credit bureau API integrations are operational. If any bureau is unavailable, fallback logic (minimum 2 of 4) is active.
Post-Conditions	- Credit Bureau reports from at least 2 of 4 bureaus have been retrieved and stored in DMS against the application. - The system has computed and stored: Credit Score (from primary bureau, CIBIL), Gross Monthly Income, FOIR, DTI, Total Existing EMI, Proposed EMI, and Net Income post-loan. - The Rule Engine has generated a Credit Scorecard score (0–100) and an automated recommendation (Approve / Refer to Manual / Decline). - A Credit Assessment Report (CAR) has been auto-generated and stored in DMS. - Credit Officer has reviewed the CAR and recorded their qualitative assessment, final recommendation (Approve / Decline / Approve with Conditions), and any policy deviations. - Application status has advanced to 'Credit Assessment Complete — Pending Approval' with the appropriate approval tier flagged. - All credit bureau hits are logged with timestamp, bureau name, and reference number for cost tracking and audit.
Main Success Flow	
Steps	104. System detects application status change to 'Pending Credit Assessment' and assigns the application to the next available Credit Officer based on workload balancing.

	105. System automatically triggers simultaneous credit bureau pulls from all four bureaus (CIBIL, Experian, Equifax, CRIF) using the applicant's PAN and personal details. 106. Bureau APIs return credit scores and full reports. System logs each response with timestamp and bureau reference number. 107. System identifies the primary bureau score (CIBIL TransUnion) and displays it prominently. Scores from other bureaus are displayed for reference with discrepancy flags if score variance > 50 points. 108. System computes financial ratios: Gross Monthly Income (from verified income documents), Total Existing EMI obligations (from bureau + declared), Proposed EMI (from applied loan amount and tenure), FOIR = (Existing EMI + Proposed EMI) / Gross Income, DTI = Total Debt / Gross Annual Income. 109. System executes the Rule Engine scorecard: evaluates 25+ credit policy rules including minimum CIBIL score, FOIR limit, DPD history, employment vintage, residential stability, and collateral coverage. 110. Rule Engine returns: Credit Scorecard Total Score (0–100), Grade (A/B/C/D), automated Recommendation (Approve / Refer / Decline), and a list of triggered policy rules with pass/fail status. 111. System auto-generates the Credit Assessment Report (CAR) containing: applicant details, bureau summary, financial analysis, scorecard results, automated recommendation, and policy exceptions list. 112. CAR appears in the assigned Credit Officer's work queue. Credit Officer opens and reviews the full CAR, bureau reports, and uploaded financial documents. 113. Credit Officer records their qualitative assessment: industry assessment for self-employed applicants, collateral adequacy assessment for secured loans, and any overriding factors not captured by the scorecard. 114. Credit Officer selects their recommendation: (A) Recommend Approval — Standard Terms, (B) Recommend Approval with Conditions (lower amount, higher rate, additional collateral), or (C) Recommend Decline. 115. Credit Officer enters supporting remarks (minimum 50 words for Decline or conditional recommendations) and flags any policy deviations. 116. Credit Officer submits the CAR. System updates application status to 'Assessment Complete — Pending Approval' and routes to the appropriate approval tier based on loan amount and deviation flags. 117. System notifies the relevant approving officer (Branch Manager / Zonal CM / CCC) of the pending approval.
Alternate Flows	
AF-003-A: Straight-Through Processing (STP) — Auto-Approved by Rule Engine	118. Rule Engine returns Score ≥ 80, Grade A, all policy rules PASS, and Recommendation = 'Approve — STP Eligible'. 119. System checks STP eligibility criteria: loan amount $\leq$ INR 5 Lakh, product is Personal Loan or Auto Loan (new), no policy deviations, CIBIL score ≥ 750. 120. If STP eligible: System generates a provisional sanction without Credit Officer review and sends for Credit Officer notation (not approval) within 2 business hours. 121. If Credit Officer does not object within 2 hours, application advances directly to Disbursement queue with status 'Conditionally Sanctioned — STP'. 122. This path targets an average TAT of < 4 hours for eligible applications, supporting the Bank's 80% STP target.

AF-003-B: Co-Applicant Added to Enhance Eligibility	123. FOIR computation (Step 5) shows FOIR > permitted limit but the Credit Officer notes income enhancement via a co-applicant would bring it within limits. 124. Credit Officer sends a request to the Customer via the portal to add a co-applicant (e.g., spouse, parent). 125. Customer adds co-applicant details. System initiates KYC and bureau pull for the co-applicant. 126. Once co-applicant KYC and bureau data are available, system recomputes combined FOIR and DTI. 127. If revised FOIR is within limits: credit assessment resumes from Step 7 with co-applicant's data included in the CAR.
Exception Flows	
EF-003-A: All Bureau APIs Unavailable	128. All four credit bureau API calls return errors or timeouts. 129. System retries each bureau 3 times with 10-second intervals. 130. If all retries fail: System sets application status to 'Assessment On Hold — Bureau API Failure' and sends an internal alert to IT Operations. 131. Credit Officer is notified. Application is placed in a 'Pending Bureau Retry' queue. 132. System automatically retries all bureau pulls every 30 minutes for up to 4 hours. 133. If bureau data is received within 4 hours: assessment resumes from Step 3. If not resolved within 4 hours: IT Operations escalates to bureau vendor. 134. SLA timer is paused during bureau unavailability to avoid unjust SLA breach for the Credit Officer.
EF-003-B: Wilful Defaulter Discovered at Bureau Pull	135. Bureau report returns a 'Wilful Defaulter' flag on the applicant from any bureau. 136. System immediately escalates the application to 'Compliance Hold — Bureau Wilful Defaulter Match' and notifies Compliance Officer. 137. Credit assessment workflow is suspended; no CAR is generated. 138. Compliance Officer reviews the bureau flag. If confirmed, application is permanently declined per RBI mandate. 139. Customer receives a decline notification without specific bureau reference details (privacy protection).
EF-003-C: Income Document Insufficient for Assessment	140. Credit Officer reviews financial documents and determines that submitted income proof is insufficient (e.g., only 1 month payslip provided instead of 3, or ITR is older than 2 years). 141. Credit Officer triggers a 'Document Deficiency Request' specifying the exact additional documents required. 142. System sends an automated notification to the Customer listing the deficient documents with a 7-business-day deadline. 143. SLA timer is paused pending customer response. 144. Upon document upload, Credit Officer is notified to resume assessment from Step 9. 145. If Customer fails to respond within 7 business days: application is marked 'Lapsed — Insufficient Documents' and closed.
Business Rules	
Rules	BR-013: Credit bureau pulls are mandatory before any credit decision. A minimum of 2 out of 4 bureau responses must be received. If only 1 or 0 bureaus respond, assessment cannot proceed until at least 2 responses are obtained.

	- BR-014: The CIBIL TransUnion score is designated as the primary bureau. In case of score conflicts between bureaus of > 50 points, the Credit Officer must document the reason for using the selected score. - BR-015: FOIR limits by product: Personal Loan: 50% max; Home Loan: 55% max; MSME Loan: 60% max. Applications exceeding FOIR limits require Zonal Credit Manager approval as a policy deviation. - BR-016: Any DPD (Days Past Due) of 90+ days in the past 24 months is a hard decline rule. DPD of 30–89 days requires Credit Officer justification and Zonal Credit Manager approval. - BR-017: Credit Officer recommendations must be supported by written remarks. 'Recommend Decline' recommendations with no supporting remarks are blocked by the system and cannot be submitted. - BR-018: Bureau inquiry charges are recorded per application for product profitability analysis. The system must not suppress bureau pulls to save cost without explicit Credit Officer instruction and supervisory approval.
--	--

4.4 UC-004 — Approve or Reject Loan Application (Multi-Level Workflow)

UC-004 Approve or Reject Loan Application — Multi-Level Workflow	
Description	This use case describes the multi-tiered loan approval process within BLAS, governed by the Bank's Loan Approval Authority Matrix. Following credit assessment, the application is routed to the appropriate approval authority based on loan amount, risk grade, and policy deviation flags. Approval levels include Branch Manager, Zonal Credit Manager, and Central Credit Committee (CCC). Each level may approve, approve with modified terms, refer upward, or reject the application.
Trigger	Application status transitions to 'Pending Approval — [Tier]' following Credit Officer submission of the Credit Assessment Report.
Priority	High — Core governance and control function
Frequency	All credit-assessed applications; approximately 350–600 per business day
Primary Actor	Branch Manager (Level 1) / Zonal Credit Manager (Level 2) / Central Credit Committee (Level 3)
Secondary Actors	Credit Officer (provides CAR), Relationship Manager (notified of decisions), Customer (receives final outcome), SMS/Email Gateway (SYS-06), BLAS Rule Engine for authority limit enforcement
Pre-Conditions & Post-Conditions	
Pre-Conditions	- Application status is 'Credit Assessment Complete — Pending Approval [Tier]'. - A complete Credit Assessment Report (CAR) has been submitted by a Credit Officer. - The approving officer is logged into the BLAS system with the appropriate approval role and active session. - The approving officer has not previously acted as the Credit Officer for the same application (4-eyes principle). - For CCC approvals: a quorum of minimum 2 CCC members must be present (either in-person or via authenticated video conference).
Post-Conditions	A formal approval, conditional approval, or rejection decision is recorded in the system with the approving officer's employee ID, timestamp, and decision rationale.

	• If Approved: Application status advances to 'Sanctioned — Pending Agreement Execution'. A Sanction Letter is auto-generated. • If Conditionally Approved: Revised terms (modified amount, rate, tenure, or additional conditions) are recorded. Customer is notified and must accept within 5 business days. • If Rejected: Application status is set to 'Rejected — [Level]'. Decline reason codes are recorded. Customer decline communication is triggered within 24 hours. • If Referred Upward: Application is escalated to the next approval tier and the relevant officer is notified. • A full audit trail of the approval decision — including the officer, timestamp, decision, and rationale — is immutably logged. • All deviations from standard policy approved at any level are logged in a Policy Deviation Register.
Main Success Flow	
Steps	146. System routes the application to the Branch Manager's approval queue based on: loan amount <= Branch Manager's sanctioned authority limit AND no policy deviations present. 147. Branch Manager receives an in-app notification and email alert for the pending approval. 148. Branch Manager opens the application in BLAS and reviews: Application summary, Credit Assessment Report (CAR), Bureau reports (read-only view), Document checklist completion status, and Credit Officer's recommendation. 149. Branch Manager selects one of four actions: (A) Approve, (B) Approve with Conditions, (C) Reject, (D) Refer to Zonal Credit Manager. 150. Branch Manager selects 'Approve'. System validates the loan amount is within Branch Manager's current authority limit (real-time check against Authority Matrix). 151. System prompts Branch Manager to enter approval remarks (minimum 20 words) and confirm the decision with employee PIN (maker-checker control). 152. Branch Manager confirms. System records the approval with: Decision, Sanctioned Amount, Sanctioned Rate, Sanctioned Tenure, Conditions (if any), Officer ID, Timestamp. 153. System updates application status to 'Sanctioned — Pending Sanction Letter Generation'. 154. System triggers auto-generation of the Sanction Letter and advances to UC-008 (Generate & Execute Loan Agreement). 155. Customer and assigned RM receive a notification: 'Your loan application [ARN] has been sanctioned. Sanction details will be shared shortly.'
Alternate Flows	
AF-004-A: Level 2 Approval — Zonal Credit Manager	156. Application is routed to Zonal Credit Manager queue because loan amount exceeds Branch Manager authority limit, OR a policy deviation (FOIR breach, DPD history) was flagged by the Credit Officer. 157. Zonal Credit Manager receives notification and reviews the full application file including Branch Manager's preliminary review comments (if any). 158. Zonal Credit Manager follows the same review process (Steps 3–6 of main flow) with Zonal authority limits applied. 159. If Zonal Credit Manager approves: flow continues from main flow Step 8. 160. If amount still exceeds Zonal authority or additional deviations are noted: Zonal CM refers to CCC (AF-004-B).

AF-004-B: Level 3 Approval — Central Credit Committee (CCC)	161. Application is referred to CCC queue due to: loan amount exceeding Zonal authority, multiple policy deviations, or complex collateral structure. 162. CCC Secretary (Credit Admin role) schedules the application for the next CCC meeting and notifies CCC members. 163. CCC members review the application and CAR independently before the meeting. 164. During CCC meeting (in-person or VC), each member votes: Approve / Conditional Approval / Reject. Voting is recorded in the system. 165. Decision is determined by majority vote with CRO having casting vote in case of a tie. 166. CCC decision is recorded by the CCC Secretary in BLAS with all member votes and meeting minutes reference. 167. If approved: flow continues from main flow Step 8.
AF-004-C: Conditional Approval — Customer Must Accept Revised Terms	168. Approving officer selects 'Approve with Conditions' and enters revised terms: e.g., approved amount INR 18 Lakh vs. applied INR 25 Lakh, additional collateral required. 169. System generates a Conditional Sanction Letter with revised terms and sends it to the Customer. 170. Customer has 5 business days to accept or decline the revised terms via the portal. 171. If Customer accepts: application advances to 'Sanctioned — Pending Agreement'. 172. If Customer declines or does not respond within 5 days: application is closed as 'Offer Declined by Customer'. No adverse record is created.
Exception Flows	
EF-004-A: Approval Authority Limit Breached	173. Branch Manager attempts to approve a loan whose amount exceeds their current authority limit. 174. System detects the breach in real-time (Step 5) and blocks the approval action. 175. System displays: 'This application exceeds your sanctioned approval authority of INR [X]. Please refer to Zonal Credit Manager.' 176. Application is automatically re-routed to Zonal Credit Manager queue. Branch Manager's review comments are retained for context. 177. Branch Manager receives a system notification confirming the re-routing.
EF-004-B: SLA Breach — Auto-Escalation	178. The application remains in an approving officer's queue beyond the configured SLA (e.g., 8 working hours for Branch Manager approval). 179. System sends a warning notification to the officer at 75% SLA consumed. 180. On full SLA breach: system sends an escalation alert to the officer's supervisor and records the SLA breach. 181. Supervisor can either re-assign the application to another eligible officer or take the approval action themselves. 182. SLA breach data is captured in the MIS dashboard for Operations Committee review.
EF-004-C: 4-Eyes Principle Violation Attempt	183. An officer who was the Credit Officer for this application attempts to approve it at any level. 184. System detects the conflict via employee ID cross-check (Step 5) and blocks the action. 185. System displays: 'You cannot approve an application on which you have previously acted as Credit Officer. Please contact your supervisor to re-assign.'

	186. The application remains in the approval queue and is flagged for supervisor re-assignment. 187. Attempted violation is logged in the security audit trail.
Business Rules	
Rules	- BR-019: The Loan Approval Authority Matrix (LAAM) is the authoritative source for approval limits. LAAM changes require CRO and CTO co-approval and must be updated in the BLAS configuration portal within 1 business day of the Board/CRC decision. - BR-020: No single officer can initiate, underwrite (credit assess), and approve the same loan. The maker-checker principle is mandatory at all levels. System enforces this via employee role and ID cross-checks. - BR-021: All rejections must include at least one of the RBI-approved decline reason codes. Free-text rejection rationale is mandatory but is for internal records only and must not be communicated verbatim to the Customer. - BR-022: CCC approvals require a minimum quorum of 2 members (out of a typical 3-person committee). A single-member approval is not permitted under any circumstance. - BR-023: Approved sanction terms (amount, rate, tenure) cannot be modified after the Customer has accepted and the Sanction Letter has been digitally signed, except through a formal Loan Modification request (UC-010).

4.5 UC-005 — Disburse Sanctioned Loan

UC-005 Disburse Sanctioned Loan	
Description	This use case covers the end-to-end loan disbursement process following Customer acceptance of sanction terms and execution of the Loan Agreement. It includes validation of all pre-disbursement conditions, NACH mandate registration for EMI collection, loan account creation in the Core Banking System (CBS), fund transfer to the Customer's designated account or directly to the payee (for Home Loans and Auto Loans), and post-disbursement confirmation communications.
Trigger	Application status transitions to 'Agreement Executed — Pre-Disbursement Checklist Pending' after the Customer has digitally signed the Loan Agreement and all sanction conditions have been noted as satisfied by the Credit Officer.
Priority	High — Final and most critical step in the loan origination journey
Frequency	Approximately 200–400 disbursements per business day
Primary Actor	Disbursement Officer
Secondary Actors	Core Banking System — Finacle (SYS-04), NACH / NPCI Mandate System (SYS-10), SMS/Email Gateway (SYS-06), Customer, Credit Officer (signs off pre-disbursement conditions), DMS (SYS-07)
Pre-Conditions & Post-Conditions	
Pre-Conditions	- Application status is 'Agreement Executed — Pre-Disbursement Checklist Pending'. - The Loan Agreement has been digitally signed by both the Customer and the authorised Bank officer via the eSign module. - All pre-disbursement conditions noted in the sanction (e.g., property valuation report received, legal vetting complete, own contribution deposited for Home Loans) have been marked as satisfied by the Credit Officer.

	- Customer's beneficiary bank account details have been verified (penny drop verification or cancelled cheque validation). - NACH mandate registration for EMI auto-debit has been completed and registered with NPCI. - The Disbursement Officer is logged in with an active session and possesses the 'Disbursement Authoriser' role.
Post-Conditions	- Loan account has been created in CBS (Finacle) with the correct product code, interest rate, tenure, and repayment schedule. - Fund disbursement has been executed: NEFT/RTGS/IMPS transaction has been initiated and CBS confirmation received. - UTR (Unique Transaction Reference) number is received from CBS and stored against the application. - Application status is updated to 'Disbursed' with disbursement date, amount, and UTR number. - Customer receives SMS and email confirmation: 'Your loan of INR [X] has been disbursed to account ending [XXXX]. Your loan account number is [Y]. Your first EMI of INR [Z] is due on [Date].' - Repayment schedule (amortisation table) is made available on the Customer's BLAS portal dashboard. - Disbursement details are reflected in the Bank's MIS and portfolio dashboards within the next data refresh cycle. - Post-disbursement origination file is archived in DMS and the physical document room (for Title Deeds and original collateral documents).
Main Success Flow	
Steps	188. Disbursement Officer opens the pre-disbursement queue in BLAS and selects the application. 189. System displays the pre-disbursement checklist: (a) Loan Agreement signed — YES/NO, (b) All sanction conditions satisfied — YES/NO, (c) Beneficiary account verified — YES/NO, (d) NACH mandate registered — YES/NO, (e) Collateral documents received (for secured loans) — YES/NO. 190. Disbursement Officer verifies each checklist item. All items must be 'YES' (green-checked) to proceed. 191. Disbursement Officer reviews disbursement details: Beneficiary name, Beneficiary account number and IFSC, Disbursement amount, Disbursement mode (NEFT/RTGS/IMPS based on amount). 192. Disbursement Officer clicks 'Initiate Disbursement'. System presents a confirmation screen with all disbursement details for final review. 193. Disbursement Officer confirms using employee PIN (second-factor authorisation for financial transactions). 194. System calls the CBS (Finacle) API: Create Loan Account with product parameters → CBS returns Loan Account Number. 195. System calls CBS Disbursement API: Initiate fund transfer to beneficiary account → CBS initiates NEFT/RTGS/IMPS payment. 196. CBS API returns a success response with UTR number and transaction timestamp. 197. System updates application status to 'Disbursed', records the Loan Account Number, UTR number, disbursement amount, and timestamp. 198. System triggers SMS and email confirmations to the Customer with loan account details, disbursement confirmation, first EMI date, and EMI amount. 199. Repayment schedule is auto-generated and made available in the Customer's portal dashboard and emailed as a PDF attachment.
Alternate Flows	

AF-005-A: Tranche Disbursement — Construction-Linked Home Loan	200. Home Loan application has a 'Construction-Linked Tranche Disbursement' flag set in the sanction terms. 201. A Tranche Disbursement Schedule (linked to construction milestones: Foundation complete, Roof slab complete, etc.) was defined in the sanction. 202. For the first tranche: Disbursement Officer verifies the milestone completion certificate from the Bank's empanelled valuer/engineer before initiating. 203. Disbursement follows main flow Steps 4–11 for the tranche amount only. 204. Subsequent tranches are triggered by fresh valuer certificates. Each tranche generates an independent UTR and is recorded separately. 205. Total disbursed amount is tracked against total sanctioned amount; final tranche cannot exceed the balance of the sanctioned limit.
AF-005-B: Disbursement to Third-Party Payee (Auto Loan / Education Loan)	206. Loan type is Auto Loan or Education Loan where disbursement is made directly to the dealer or educational institution (not to the Customer's account). 207. Beneficiary account details belong to the third-party payee (verified against dealer/institution empanelment records). 208. Disbursement Officer additionally verifies: (a) Invoice / demand letter from payee, (b) Payee bank account details match empanelment records. 209. Disbursement proceeds via main flow Steps 4–11. Payment confirmation is sent both to the Customer and the payee.
Exception Flows	
EF-005-A: CBS API Failure During Loan Account Creation	210. Step 7 CBS API call for loan account creation returns an error or times out. 211. System retries the CBS API call 3 times at 30-second intervals. 212. If all retries fail: System sets application status to 'Disbursement On Hold — CBS Integration Failure' and sends an automated alert to IT Operations and the Disbursement Officer's supervisor. 213. IT Operations investigates and resolves the CBS connectivity issue. 214. Once resolved: Disbursement Officer re-initiates from Step 7. The application must not be submitted again from Step 1 — only the CBS call is retried. 215. All retry attempts and failure timestamps are logged for SLA and incident management.
EF-005-B: Beneficiary Account Validation Failure	216. Pre-disbursement penny drop verification for the beneficiary account returns a mismatch (account name does not match Customer's name). 217. Disbursement Officer cannot proceed. Checklist item (c) remains 'NO'. 218. System sends a notification to the Customer and assigned RM requesting re-confirmation of beneficiary account details. 219. Customer updates account details through the portal. A fresh penny drop verification is triggered. 220. Once verified successfully: Disbursement Officer is notified and proceeds with main flow. 221. If mismatch cannot be resolved within 5 business days: application is escalated to Branch Manager for decision (may result in Cheque disbursement as a last resort with appropriate approvals).
EF-005-C: NACH Mandate Registration Failure	222. NACH mandate registration with NPCI fails (rejected by Customer's bank — insufficient mandate details, closed account, or bank not on NACH network). 223. Disbursement is blocked until NACH mandate is registered (mandatory pre-disbursement condition).

	224. Customer is notified with specific NACH rejection reason and instructed to provide an alternate bank account or visit a branch to register a physical NACH mandate. 225. Disbursement Officer tracks NACH status. Once re-registered and confirmed by NPCI, disbursement may proceed.
Business Rules	
Rules	• BR-024: Disbursements of INR 2,00,000 and above must use RTGS or NEFT. IMPS may be used only for amounts below INR 2,00,000. This is system-enforced and cannot be overridden by the Disbursement Officer. • BR-025: All pre-disbursement checklist items must be in 'Verified' status before the disbursement initiation button is enabled. The system must enforce this as a hard block — no override is permitted for any user role. • BR-026: NACH mandate registration must be completed and confirmed by NPCI before disbursement for all loan products with EMI repayment. This is a mandatory pre-disbursement condition. • BR-027: In case of CBS transaction failure after debit from Bank's Nostro/internal account, a reconciliation process must be initiated immediately. The Customer must not be informed of disbursement until CBS credit confirmation is received. • BR-028: Disbursement must occur within 7 working days of Customer acceptance of sanction terms, subject to pre-disbursement conditions being met. Delays beyond 7 days require Branch Manager approval and must be documented.

5. Use Case Relationship Diagram (Textual)

The following table describes include, extend, and generalisation relationships between use cases, representing the structural dependencies in the BLAS use case model.

Relationship Type	Base Use Case	Related Use Case	Description
<<include>>	UC-001 Submit Loan Application	UC-007 Upload & Validate Documents	Every loan application necessarily includes document upload as part of the submission process.
<<include>>	UC-001 Submit Loan Application	UC-002 Perform Digital KYC	KYC is a mandatory included step in every loan application lifecycle.
<<include>>	UC-003 Credit Assessment	UC-007 Upload & Validate Documents	Credit assessment requires verified documents to be present; document review is included.
<<include>>	UC-005 Disburse Loan	UC-008 Generate Loan Agreement	Disbursement requires a fully executed Loan Agreement; agreement generation is included.
<<extend>>	UC-002 Digital KYC	VKYC Session (AF-002-A)	Video KYC extends the base eKYC use case when Aadhaar OTP path is unavailable or insufficient.
<<extend>>	UC-004 Approve Loan	UC-009 Manage SLA Escalation	SLA escalation extends the approval workflow when approval is not completed within configured SLA.
<<extend>>	UC-005 Disburse Loan	Tranche Disbursement (AF-005-A)	Tranche disbursement extends the standard single-disbursement use case for construction-linked loans.
<<generalisation>>	Approval Actor	Branch Manager, Zonal CM, CCC	All three approval actors generalise from the abstract 'Loan Approver' actor role; they share the same base approval workflow.

6. Non-Functional Constraints Applicable to Use Cases

NFR Area	Applicable Use Cases	Constraint
Performance	UC-001, UC-006	Application form page load: < 2 seconds at P95. OTP delivery: < 30 seconds.
Performance	UC-002	UIDAI eKYC API round-trip: < 5 seconds. PAN API: < 3 seconds.
Performance	UC-003	Credit bureau parallel pull completion (all 4 bureaus): < 10 seconds P95.
Performance	UC-005	CBS loan account creation and disbursement initiation: < 8 seconds P95.
Security	All UCs	All sessions enforce TLS 1.2+ encryption. All PII fields (Aadhaar, PAN, account numbers) are masked in display and encrypted at rest (AES-256).
Security	UC-002, UC-003	Bureau inquiry and eKYC events generate immutable audit log entries; accessible only to Compliance and Audit roles.
Security	UC-004, UC-005	Financial approval and disbursement actions require PIN-based second-factor confirmation (in addition to session authentication).
Availability	UC-001 to UC-010	BLAS must be available 99.9% of the time. Planned maintenance limited to Sunday 2–6 AM. All UC paths must degrade gracefully if external APIs are unavailable.
Audit	UC-004, UC-005	Every approval decision and every disbursement transaction must generate a tamper-evident, timestamped audit record compliant with RBI IT Framework 2011.
Compliance	UC-002	eKYC consent must be stored with timestamp, IP address, and consent text version. Aadhaar data must not be stored beyond regulatory necessity.
Usability	UC-001, UC-006	Customer-facing screens must achieve WCAG 2.1 Level AA accessibility compliance. Portal must be fully functional on mobile screens ≥ 375 px wide.

7. Document Revision History

Version	Date	Author	Change Description
0.1	15 Mar 2025	Priya Sharma, Sr. BA	Initial draft — UC-001 and Actor catalogue
0.5	02 Apr 2025	Priya Sharma, Sr. BA	Added UC-002 through UC-005; alternate and exception flows
0.8	18 Apr 2025	Anand Mehta, Tech Lead	Reviewed NFRs, added system actors, refined CBS integration exception flows
0.9	28 Apr 2025	QA Lead + Compliance	Added business rules; compliance review of UC-002 (KYC); DPDPA 2023 alignment
1.0	06 May 2025	Priya Sharma, Sr. BA	Final version — all review comments incorporated and approved

8. Document Approval & Sign-Off

Role	Name	Signature	Date	Status
BA Lead / Author	Ms. Priya Sharma	_____	_____	Approved
Solution Architect	Mr. Anand Mehta	_____	_____	Approved
Head of Retail Banking	Ms. Deepa Krishnan	_____	_____	Approved
Chief Risk Officer	Mr. Suresh Patel	_____	_____	Approved
QA Manager	Ms. Kavita Rao	_____	_____	Approved
Chief Compliance Officer	Ms. Anjali Singh	_____	_____	Approved
